The head gasket is a mechanical seal that's fitted between the engine block and the piston cylinder head. If your engine often overheats, your head gasket may have blown. You can also check your coolant levels, since low levels may mean the head gasket has blown and coolant is leaking out.

How to Check and Repair a Blown Head Gasket: 15 Steps

The Lupo was introduced in October 1998, to fill a gap at the bottom of the Volkswagen model range caused by the increasing size and weight of the Polo. The right hand drive version for the United Kingdom was launched in the spring of 1999. The 1998 Lupo was a badge engineered version of the stablemate, the 1997 SEAT Arosa.. Both use the A00 platform which is a shortened version of the Polo ...

Volkswagen Lupo - Wikipedia

With the engine off, disconnect the crankcase ventilation hose from the emission control valve atop the valve cover, then plug the hose. Start the engine and let it idle. Disconnect the blue coolant temperature sensor harness connector. Let the engine idle for one minute, then reconnect the harness connector.
