The K20 is essentially an aluminum engine. The block is aluminum, with steel cylinder sleeves; the cylinder head is also made from aluminum. The crankshafts are similar across the family as well, using forged steel. Another advantage of this engine can be found in the valvetrain, as roller rocker arms are used that reduce valvetrain friction.

While it's cheaper to build engines driven by a timing belt, you'll also run the risk that this belt snaps off and breaks the entire motor. That's why timing belts get replaced after some 60,000 - 105,000 miles. Now let's have a closer look at the timing chain, which you can find among all K-Series engines.
